## The Mechanics

ecbi

## What Scale?

ecbi

- 1 percent of corporate passengers donating (on average) 1 per cent of their ticket price would yield **\$125 million annually**.
- 10 percent of corporates that offset air travel adopt CAPS: **\$100 million annually**

**Resilient Cities 2018**

**SUPPORT THE ADAPTATION FUND**

Climate change is increasingly contributing to sea level rise and increasing floods, droughts and storm intensity while jeopardizing food security, reducing the predictable availability of fresh water, endangering lives and livelihoods and exacerbating the spread of disease and other threats to human health in vulnerable countries throughout the globe.

The Adaptation Fund focuses through grants, concessional financial products and programmes that have innovative approaches to developing countries and build resilience to climate change. It also promotes a climate finance model: climate-resilient infrastructure, which empowers developing countries to build national resilience and design and implement adaptation projects directly.

The Fund currently funds adaptation and resilience projects and programmes in more than 70 developing countries across the world, including in health care, water management, sustainable agriculture, disaster risk reduction, coastal zone management, disaster risk reduction, health and other development.

Resilient Cities 2018 congress participants are encouraged to donate one percent (1%) of their travel cost in solidarity with the global process and most vulnerable communities to the Adaptation Fund. For more information, download the [Oxford Crowdfunding for Adaptation Brochure](#).

### HOW TO ACHIEVE CLIMATE NEUTRALITY

**STEP 1: GO LOW-TO-NO**  
Achieve low or net-zero emissions through 100 percent renewable energy and other strategies, beginning in government operations and infrastructure with the aim to scale up to the community scale.

**STEP 2: DIVEST**  
Divest from fossil fuels and unsustainable practices, freeing up resources for sustainable investments.

**STEP 3: INVEST**  
Invest in ambitious mitigation and adaptation actions, actively implementing sustainable public procurement and other strategies not always considered in climate planning.

**STEP 4: OFFSET**  
Offset any emissions that cannot be further reduced or avoided, ideally through recognized mechanisms such as purchasing credits and donation to funds which support integrated, sustainable urban and territorial development. These offsetting opportunities may also be local and voluntary.

**STEP 4: OFFSET**  
Offset any emissions that cannot be further reduced or avoided, ideally through UN recognized mechanisms such as purchasing credits and donation to funds which support integrated, sustainable urban and territorial development. These offsetting opportunities may also be local and voluntary.

- 'Climate Neutrality' is more than 'carbon neutrality'
- 'Offsetting' is more than purchasing carbon credits

## Neutrality: A Case Study

### Good offices

As a protecting power, Switzerland assumes a go-between role © Keystone

Switzerland's good offices are a long-standing tradition and play a key role in Swiss peace policy. Switzerland can build bridges where others are prevented from doing so, because it does not belong to any power bloc and does not pursue a hidden agenda.

Switzerland supports conflicting parties in their search for a negotiated solution, either acting as mediator directly or supporting negotiations and the mediation of other states or international and regional organisations. As a protecting power, it safeguards the interests of foreign states.

In international law and international relations, the term 'good offices' under the UN Charter refers to all diplomatic and humanitarian initiatives by a third country or a neutral institution whose purpose is to resolve a bilateral or international conflict or to bring the parties to the negotiating table.

## The Commission calls for a climate neutral Europe by 2050

28/11/2018

Today the European Commission adopted a strategic long-term vision for a prosperous, modern, competitive and climate neutral economy by 2050 – A Clean Planet for all. The strategy shows how Europe can lead the way to climate neutrality by investing into realistic technological solutions, empowering citizens, and aligning action in key areas such as industrial policy, finance, or research

while ensuring social fairness for a just transition.

## Visa Presents Crowdfunding Installation at COP24 to Help Fight Deforestation

**UN Climate Change News, 3 December 2018** – At the UN Climate Change Conference COP24 in Katowice, the payments network Visa Inc. is presenting an innovative way to make donations for climate action using a new digital platform, **with benefits of the activity going toward the climate resilience projects of the Adaptation Fund**, many of which involve ecosystem-based measures that improve peoples' lives and livelihoods while restoring natural protections such as forests to protect soils and sustainably manage land and water resources.
